Data Analyst / Business Intelligence (BI) Analyst with 3+ years of experience in business intelligence, data analysis, and product performance tracking. Hands-on experience developing KPIs, writing and optimizing SQL queries, and building stakeholder-facing dashboards in Power BI to translate complex data into actionable recommendations. Strong focus on identifying trends, improving data quality and ETL automation, and presenting insights to cross-functional product and business teams. Basic German (actively learning B1).

Skills & Technologies

- **Languages:** Python, SQL, JavaScript
- **Tools & Frameworks:** Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), Google Sheets, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebooks, Google Cloud Platform (Firestore, Cloud Storage), Dialogflow, SAP Business Data Cloud, Git, Node.js
- **Expertise:** Data Analysis, Business Intelligence, Data Visualization, KPI Development, Dashboarding, Data Cleaning, ETL Pipelines, Data Modelling, Statistical Analysis, Regression Analysis, Predictive Analysis, Cohort & Funnel Analysis, Trend Analysis, Data Validation, Reporting & Performance Tracking.

Work Experience

Framework Engineer (Analytics and Automation)	Quantiphi Analytics Bangalore, India	January 2023 - Nov 2023
• Reduced unresolved user queries by 20% by building Power BI dashboards to track core KPIs (fallback rate, response latency, intent accuracy) across 5 production chatbots and presenting findings to product stakeholders to prioritize fixes. • Analysed 10,000+ chatbot session logs using optimized SQL queries to identify 3 critical drop-off points, uncovering user journey gaps and directly informing product improvements. • Increased reporting efficiency by 50% by automating ETL pipelines and data validation workflows using Python and SQL, enabling faster turnaround for business and product teams. • Improved chatbot intent accuracy by 15% by identifying misclassification patterns across production agents and delivering structured insights to the ML team to support model retraining		
Framework Engineer/Analyst	Quantiphi Analytics Bangalore, India	December 2021 - January 2023
• Established a standardized KPI framework (fallback rate, response latency, user satisfaction score) across 5 production chatbots in collaboration with product and operations stakeholders, enabling consistent performance tracking and reporting. • Improved data quality by 30% by implementing SQL-based validation checks on 500+ records per agent per cycle, ensuring data accuracy and reliability. • Maintained 100% data availability (zero downtime) by managing GCP data pipelines (Firestore, Cloud Storage) supporting chatbot deployments processing 400+ session records per cycle. • Built 3 interactive data visualisation dashboards in Power BI to support strategic decision-making and drive actionable insights for stakeholders.		
Data Analyst Intern	Quantiphi Analytics Bangalore, India	Aug 2021 - Dec 2021
• Identified 4 high-impact failure intents by analysing chatbot session data using SQL, improving intent accuracy from 65% to 85% through targeted retraining. • Automated data ingestion by building a CMS-to-Firestore pipeline, eliminating manual errors and saving 5+ hours/week in content operations.		

Research Analyst (R&D Assistant Intern)

Oretes Consulting Pvt. Ltd.

Bangalore, India

Mar 2021 - July 2021

- Delivered a comparative analysis of RASA vs. IBM Watson across key performance metrics, supporting strategic platform selection for chatbot deployment.
- Reduced manual workload by 30% by designing and deploying a 16-intent chatbot using RASA, integrated into Slack for internal operations.

Education

M.Sc. Data Science, AI & Digital Business, GISMA University of Applied Sciences

2023 - 2025

Full-time study relocated to Berlin specifically to pursue this degree.

Projects & Extra

Telecom Customer Churn Dashboard

Analysed 7,000+ customer records in Power BI using segmentation and calculated measures to identify key churn drivers. Defined KPIs and visualised trends across contract types and payment behaviour, delivering a 3-page dashboard with actionable retention recommendations for stakeholders.

Thesis: “Predicting Disease Outbreaks Using Machine Learning and Public Health Data”

Developed predictive models using regression and time-series forecasting (LSTM, ARIMA, Neural Networks) on epidemiological and climate datasets. Achieved 27% improvement in RMSE over baseline models, demonstrating stronger forecasting accuracy for disease outbreak prediction. Published on Dec 2025, DOI: 10.13140/RG.2.2.35607.23208.

Certifications

Introduction to Power BI, DataCamp

February 2026

SAP Business Data Cloud, SAP

January 2026

Google Cloud: Prompt Engineering Guide, Google

January 2026

Google Associate Cloud Engineer, Google Cloud

March 2023

Customer Experiences with Contact Center AI, Google

Google Cloud Essentials & Cloud Engineering, Google

Languages

- English : Native Proficiency
- German : Basic proficiency (actively learning B1)
